

## Unit: 4.1

### Coding

#### Key Learning

- To begin to understand selection in computer programming.
- To understand how an IF statement works.
- To understand how to use co-ordinates in computer programming.
- To understand the 'repeat until' command.
- To understand how an IF/ELSE statement works.
- To understand what a variable is in programming.
- To use a number variable.
- To create a playable game.

#### Key Resources

Tools

2Dos

2Chart

Free code gibbon

#### Key Vocabulary

##### Action

The way that objects change when programmed to do so. For example, move.

##### Alert

This is a type of output. It shows a pop up of text on the screen.

##### Algorithm

A precise, step-by-step set of instructions used to solve a problem or achieve an objective.

##### Background

In 2Code the background is an image in the design that does not change.

##### Button

A type of object that responds to being clicked on.

##### Code blocks

A way to write code using blocks which each have an object or an action.

##### Command

A single instruction in 2Code.

##### Debug/Debugging

Fixing code that has errors so that the code will run the way it was designed to.

##### Design

In coding, this is a plan for the program showing the visual look of the user interface (the screen) with the objects. The algorithm can be represented as part of the design, showing actions and events.

##### Execute

This is the proper word for when you run the code. We say, 'the program (or code) executes.'

## Unit: 4.1

### Coding

#### Key Vocabulary

##### Event

An occurrence that causes a block of code to be run.

The event could be the result of user action such as the user pressing a key (when Key) or clicking or swiping the screen (when Clicked, when Swiped). In

2Code, the event commands are used to create blocks of code that are run when events happen.

##### Nest

When coding commands are put inside other commands. These commands only run when the outer command runs.

##### Implement

When a design is turned into a program using coding.

##### Repeat until

In 2Code this command will repeat a block of commands until a condition is met.

##### Flowchart

A diagram that uses specifically shaped, labelled boxes and arrows to represent an algorithm as a diagram.

##### 'If/Else' Statement

A conditional command. This tests a statement. If the condition is true, then the commands inside the 'if block' will be run. If the condition is not met, then the commands inside the 'else block' are run.

##### Object

Items in a program that can be given instructions to move or change in some way (action). In 2Code Gibbon, these include character, turtle, button, vehicle, animal, food, shape, number, input and label.

##### Predict

Use your understanding of a situation to say what will happen in the future or will be a consequence of something.

##### 'If' Statement

A computer uses an IF statement to decide which bit of code to run. IF a condition is true, then the commands inside the block will be run.

##### Input

Information going into the computer. This could be the user moving or clicking the mouse, or the user entering characters on the keyboard. On tablets there are other forms such as finger swipes, touch gestures and tilting the device.

##### Prompt

A question or request asked in coding to obtain information from the user in order to select which code to run.

##### Repeat

This command can be used to make a block of commands run a set number of times or forever.

##### Run

Clicking the Play button to make the computer respond to the code.

## Unit: 4.1 Coding

### Key Vocabulary

#### Properties

These determine the look and size of an object. Each object has properties such as the image, scale and position of the object.

#### Timer

In coding, use a timer command to run a block of commands after a timed delay or at regular intervals.

#### Selection

Selection is a decision command. When selection is used, a program will choose which bit of code to run depending on a condition.

#### Sequence

This is when a computer program runs commands in order.

#### Variable

A named area in computer memory. A variable has a name and a value. The program can change this variable value. Variables are used in programming to keep track of things that can change while a program is running.

### Key Images

Design

Open design mode in 2Code.

Exit Design

Switch to code mode in 2Code.

change variable

A change variable block.

An 'if/Else' command.

Repeat until.

Creating a variable in 2Code.

## Unit: 4.1

### Coding

#### Key Questions

##### Explain the stages of the design, code, test, debug coding process.

This is a process to go through as you create a program using coding

- Design: create a design which could be a flowchart, a labelled diagram or a storyboard. This helps to think through the algorithms required
- Code: code the algorithms using to code and adapting the design.
- Test and Debug: see if the program works and fix any errors.

##### How can variables and if/else statements be useful when coding programs with selection?

The variable could be set either to 0 or 1 and this could be changed by user action or a timer. If/else statement outcomes could depend upon the value of the variable. command for selection.

##### What does selection mean in coding and how can you achieve this in 2Code?

The code will contain commands that require a decision and the next code to run will depend upon the outcome of this decision. In 2Code we used the 'if' command for selection.

##### What is the difference between the different object types in 2Code Gibbon level?

The different objects have different properties. This makes them suitable for different types of programs.

- Buttons can only be clicked and have their colour and text changed.
- Vehicles have speed and angle.
- Characters have movement in 4 directions.
- Turtles have rotation, pen up and down.

## Unit: 4.2

### Online Safety

#### Key Learning

- To understand how children can protect themselves from online identity theft.
- To understand that information put online leaves a digital footprint or trail and that this can aid identity theft.
- To identify the risks and benefits of installing software including apps.
- To understand that copying the work of others and presenting it as their own is called 'plagiarism' and to consider the consequences of plagiarism.
- To identify appropriate behaviour when participating or contributing to collaborative online projects for learning.
- To identify the positive and negative influences of technology on health and the environment.
- To understand the importance of balancing game and screen time with other parts of their lives.

#### Key Resources

2Investigate

SPAM

#### Key Questions

##### What is meant by a digital footprint?

A digital footprint is the information that exists about a person based upon sites that they have visited, searches that they have done, information that they have shared and other online behaviours.

##### What is SPAM?

SPAM messages are emails or online messages sent from a computer to many other users. The users are sent the email without requesting it. The purpose of SPAM is for advertising, phishing or malware.

##### What is meant by plagiarism?

Plagiarism refers to using someone else's work and claiming it to be your own.

## Unit: 4.2

### Online Safety

#### Key Vocabulary

##### AdFly

An online advertising marketplace that allows publishers to monetize their website traffic by placing advertisements on their site.

##### Collaborate

To work jointly on an activity or project.

##### Digital footprint

The information about a person that exists on the Internet as a result of their online activity.

##### Plagiarism

Taking someone else's work or ideas and passing them off as one's own.

##### Spam

Messages sent over the Internet, typically to many users, for the purposes of advertising, phishing or spreading malware.

##### Attachment

A file, which could be a piece of work or a picture, that is sent with an email.

##### Cookies

A small amount of data generated by a website and saved by a web browser. Its purpose is to remember information about the user.

##### Malware

Software that is specifically designed to disrupt, damage, or gain unauthorised access to a computer system.

##### Ransomware

A type of malicious software designed to block access to a computer system until a sum of money is paid.

##### Virus

A piece of code which can copy itself and typically has a damaging effect on the device, such as corrupting the system or destroying data.

##### Citation

Making reference to the original source of a piece of information quotation or image.

##### Copyright

When the rights to something belong to a specific person.

##### Phishing

Practice of sending email pretending to be from reputable companies in order to persuade individuals to reveal personal information, such as passwords and credit cards numbers.

##### SMART rules

A set of rules based around the word SMART designed to help you stay safe when online. SMART represents the words Safe, Meet, Accept, Reliable, Tell.

##### Watermark

Watermarks are used mainly on images or videos to show who the content belongs to.

## Unit: 4.3

### Spreadsheets

#### Key Learning

- To format cells as currency, percentage, decimal to different decimal places or fraction.
- To use the formula wizard to calculate averages.
- To combine tools to make spreadsheet activities such as timed times tables tests.
- To use a spreadsheet to model a real-life situation.
- To add a formula to a cell to automatically make a calculation in that cell.

#### Key Resources

#### Key Vocabulary

##### Row

Vertical reference points for the cells in a spreadsheet.

##### Column

Horizontal reference points for the cells in a spreadsheet.

##### Spreadsheet

A computer program that represents data in **cells** in a grid of **rows** and **columns**. Any cell in the grid may contain either data or a **formula** that describes the value to be inserted based on the values in other cells.

##### Formula

A group of letters, numbers, or other symbols which represents a scientific or mathematical rule. The plural of formula is formulae.

##### Average

A number expressing the typical value in a set of data. Also known as the mean. It is calculated by dividing the sum of the values in the set by their number.

##### Budget

The amount of money available to spend on a project.

##### Chart

A diagram that represents data. Charts include graphs and other diagrams such as pie charts or flowcharts.

## Unit: 4.3

# Spreadsheets

### Key Vocabulary

#### Data

A collection of information, especially facts or numbers, obtained by observation, questions or measurement to be analysed and used to help decision-making.

#### Format Cell

The way that data is displayed in a cell. For example using units such as £ or \$.

#### Percentage

'per' 'cent' means number of parts per hundred.

#### Timer

When placed in the spreadsheet, clicking the timer adds 1 to the value of the cell to its right every second until it is clicked again.

#### Decimal place

The position of a digit to the right of a decimal point. In 2Calculate, the number of decimal places to be displayed can be chosen.

#### Formula Wizard

Use the formula wizard or type into the formula bar to create a formula in a cell, this will calculate the value for the cells based upon the value of other cells in the spreadsheet.

#### Place value

This is the value of each digit within a number. For example 354, the 3 = 3 hundreds, the 5 = 5 tens and the 4 = 4 ones.

#### Equals tool

Tests whether the entered calculation in the cells to the left of the tool has the correct answer in the cell to the right of the tool.

#### Line graph

A line graph is used to display information which can change over time. For example, temperature at different times of the day.

#### Random Number Tool

This tool, when clicked, will generate a random number.

#### Spin Tool

This tool changes a number to the right of it by one each time an arrow is pressed.

## Unit: 4.3

# Spreadsheets

### Key Questions

**How would you add a formula so that the cell shows the percentage score for a test?**

Click on the cell where you want the percentage score to be displayed then click the formula wizard button. Click on the cell that contains the score. Choose the  $\div$  operation then click on the cell that shows what the test was out of. Click OK. Click on the answer cell and then the format cell button. Choose % as the format.

**Which tools would you use to create a timed times tables test in 2Calculate?**

You could use the random tool, the spin tool, the equal tool and the timer tool.

**Give an example of the data that could be best represented by a line graph.**

Data where both axes will contain continuous data so that you can see trends in the data. Such as ages and heights, time and temperature, years and costs.

**Explain what a spreadsheet model of a real-life situation is and what it can be used for?**

It represents the data of a situation for example budgeting for a party, working out how big a field needs to be for a certain number of animals, working out how to spend your pocket money over time.

## Unit: 4.4

# Writing for Different Audiences

### Key Learning

- To explore how font size and style can affect the impact of a text.
- To use a simulated scenario to produce a news report.
- To use a simulated scenario to write for a community campaign.

### Key Resources

**purple  
mash**

2Publish Plus

2Simulate

### Key Images

Text Toolbar. Click here to format your text.

### Key Vocabulary

#### Campaign

An organised course of action to achieve a goal.

#### Format

The way in which something is arranged or set out.

#### Font

A set of type which shows words and numbers in a particular style and size.

#### Genre

The style or category type of a piece of art, music or writing.

#### Opinion

A view or judgment someone forms about something, not always based on fact.

#### Reporter

A person who reports news or conducts interviews for the press or broadcasting media.

#### Viewpoint

The way someone sees or thinks about something.

### Key Questions

#### Why should I change the font when I am writing?

Changing the appearance of the font can help make things easier to read and highlight important parts of the text.
